### Natural Products and Drug Discovery | ScienceDirect

Pharmacognosy is the study of plants or other natural sources as a possible source of drugs.The American Society of Pharmacognosy defines pharmacognosy as "the study of the physical, chemical, biochemical, and biological properties of drugs, drug substances, or potential drugs or drug substances of natural origin as well as the search for new drugs from natural sources".

### Pharmacognosy - Wikipedia

Thanks to increased chemical and drug development in the 20th century, more drugs with abuse potential became available. LSD, methamphetamine and synthetic opiates are all relatively recent drugs. To counter the growing tide of addiction, drug laws became stricter, and drug addiction started to carry a serious social stigma.

### History of Drug Abuse

The impact of time, therapy area, and route of administration on 13 physicochemical properties calculated for 664 drugs developed from a natural prototype was investigated. The mean values for the majority of properties sampled over five periods from pre-1900 to 2013 were found to change in a statistically significant manner. In contrast, lipophilicity and aromatic ring count remained ...

### Analysis of Physicochemical Properties for Drugs of ...

About 40% of the drugs currently used are derived from natural sources. Most are pure substances which are isolated from various organisms and

used directly or after chemical modification. This book describes the origin of such compounds, their chemistry and biochemistry as well as their employment in medicine.

**Erowid Library/Bookstore : 'Drugs of Natural Origin'**

Cultivation of drugs of natural origin: The cultivation of medicinal plants requires a lots of care and management as compare to that of other plants.

**Cultivation and Collection of Drugs of Natural Origin**

When the nucleus of drug obtained from natural source is retained but the chemical structure is altered, we call it semi-synthetic. Examples include Apomorphine, Diacetyl morphine, Ethinyl Estradiol, Homatropine, Ampicillin and Methyl testosterone. Most of the drugs used nowadays (such as antianxiety drugs, anti convulsants) are synthetic forms. 5.
