You can search Google Books for any book or topic. In this case, let's go with "Alice in Wonderland" since it's a well-known book, and there's probably a free eBook or two for this title. The original work is in the public domain, so most of the variations are just with formatting and the number of illustrations included in the work. However, you might also run into several copies for sale, as reformatting the print copy into an eBook still took some work. Some of your search results may also be related works with the same title.

The scientific formula for work is  $w = f \times d$ , or, work is equal to force multiplied by distance. Simple machines cannot change the amount of work done, but they can reduce the effort force that is required to do the work! For the inclined plane and lever, less effort (effort force) is needed to do the same work because the distance is increased.

While the equation for work is  $W = Fd$ , this only works for constant forces exerted in the direction of the motion.

Sample Problem A 105g hockey puck is sliding across the ice. A player exerts a constant 4.5N force over a distance of 0.15m.

Work and Energy. Mechanical Energy; The Law of Conservation of Energy; Power; Machines. Types of Machines; Work and Energy. When a force acting on a body displaces the body in the direction of the force work is said to have been done. Work is the product of force and displacement in the direction of the force;  $\text{Workdone} = \text{force } F \times \text{displacement } s$ .
