Is The Cylinder Head For

In an internal combustion engine, the cylinder head sits above the cylinders on top of the cylinder block. It closes in the top of the cylinder, forming the combustion chamber. This joint is sealed by a head gasket. In most engines, the head also provides space for the passages that feed air and fuel to the cylinder, and that allow the exhaust to escape. The head can also be a place to mount the valves, spark plugs, and fuel injectors.

The cylinder head closes the top of the cylinder and houses valves that allow fuel and air in and exhaust out of the cylinder. There may be one or two cylinder heads on your vehicle. Older cylinder heads feature a single intake and exhaust valve per cylinder, but most modern vehicles have two intake and two exhaust valves per cylinder. When these valves are sealed, your piston creates compression which allows the fuel and air to combust.
