Using the formulas below, one can determine the world's annual growth rate and the number of years it will take the population to double if the growth rate remains constant. Intrinsic rate of natural increase = (birth rate - death rate)/10 = (21 - 9)/10 = 1.2%

Student Worksheet People sometimes believe that our rapid population growth is mitigated by death-causing events (wars, natural disasters, accidents, diseases, etc.) taking place around the world. As devastating as these events are, they often have little impact on overall population growth worldwide.

World Population Video

Populations show two types of growth, exponential and logistic. With exponential growth, a population increases by a fixed percent and its resulting graph is the classic "J"-shaped" curve. Exponential growth occurs in nature with a small population and ideal conditions; however, it cannot be sustained indefinitely.
