Stata stores data in a proprietary format, i.e., the .dta file. Once data are stored in a .dta file, we can quickly load the data into memory by the use of the command `load`. If data are given in other formats, we have to input / read / import them into Stata first. One common such format is known as a raw data file, which Stata assumes to have a file extension ...

WSJT-X is a computer program designed to facilitate basic amateur radio communication using very weak signals. The first four letters in the program name stand for "Weak Signal communication by K1JT," while the suffix "-X" indicates that WSJT-X started as an extended and experimental branch of the program WSJT.

In fact, I recommend that you type your commands on a separate file, called a do file, as explained in Section 1.2 below, but for now we will just type in the command window. The GUI can be helpful when you are starting to learn Stata, particularly because after you point and click on the menus and dialogs, Stata types the corresponding command for you.
