Concept visual of the surface of Venus. Credit: NASA/Goddard Space Flight Center Conceptual Image Lab The surface of Venus is about four times hotter than boiling water, and it rains acid strong enough to dissolve bones and even the hardest of microorganisms. Though we've seen microbes survive and grow in some pretty extreme environments, it's unlikely that there are any living organisms ...

One thing about the event horizon: once matter is inside it, that matter will fall to the center. With such strong gravity, the matter squishes to just a point - a tiny, tiny volume with a crazy-big density. That point is called the singularity. It is vanishingly small, so it has essentially an infinite density.
