Section 3 (page 30) 1. Radiation has very high-energy waves and can break up DNA. 2. The ultra-violet radiation breaks up the skin cells' DNA. The DNA molecules don't repair properly, and the cell can reproduce with a mutation. 3. The first way radon destroys genetic information is by breaking up the DNA with high energy waves.

CELL REPRODUCTION!

Section 8-3: Meiosis.

Read the passage below, which covers topics from your textbook. Answer the questions that follow. Meiosis is a process of nuclear division that reduces the number of chromosomes in new cells to half the number in the original cell. In animals, meiosis produces haploid reproductive cells called gametes.
