Background: Patients admitted to general internal medicine wards might receive a large number of drugs and be at risk for drug-related problems (DRPs) associated with increased morbidity and mortality. This study aimed to detect suboptimal drug use in internal medicine by a pharmacotherapy evaluation, to suggest treatment optimizations and to assess the acceptance and satisfaction of the prescribers.

Hypothetical- Deductive Reasoning: works from general to specific. Develop hypotheses to explain a patient's clinical problem and apply collected information to test the hypotheses in order to try and confirm or exclude a hypothesis. In a hypothetical-deductive process, a classic rank-ordered list of differential diagnoses is generated.
