Equation of a plane A point $r(x, y, z)$ is on a plane if either (a) $r \cdot d = |d|^2$, where d is the normal from the origin to the plane, or (b) $x/X + y/Y + z/Z = 1$ where X, Y, Z are the intercepts on the axes. Vector product $A \times B = n |A||B|\sin \theta$, where θ is the angle between the vectors and n is a unit vector normal to the plane containing A and B in the direction for which A, B, n form a right-handed set ...

In classical mathematics, analytic geometry, also known as coordinate geometry or Cartesian geometry, is the study of geometry using a coordinate system. This contrasts with synthetic geometry. Analytic geometry is used in physics and engineering, and also in aviation, rocketry, space science, and spaceflight. It is the foundation of most modern fields of geometry, including algebraic ...
