A fire-tube boiler is a type of boiler in which hot gases pass from a fire through one or more tubes running through a sealed container of water. The heat of the gases is transferred through the walls of the tubes by thermal conduction, heating the water and ultimately creating steam.. The fire-tube boiler developed as the third of the four major historical types of boilers: low-pressure tank ...

Fire-tube boiler - Wikipedia

Casting numbers of 638632 (MB mold) and the 641087 casting. Engine serials numbers for the CJ-2A started out being stamped on the side on the block like the MB. These blocks (other than having "CJ2A-" instead of "MB-") are identical to the MB blocks. At some point very early in '46, the serial numbers moved to the top of the engine block.

Since Javascript was (and is) the most widely used client-side programming language, browsers competed and pushed to create the most optimized Javascript engines for best performance. One of these engines was Chrome V8, on top of which Node.js was later built. As a result of this momentum, Javascript flourished, and so did the V8 engine.
