After the projects loads in Visual Studio, press Ctrl+F5 (Start without debugging) or use the green Start button on the Visual Studio toolbar to run the program. If there are multiple projects, the one with the Main method must be set as the startup project. To set the startup project, ...

How to run a program (C#) - Visual Studio | Microsoft Docs

Start debugging with multiple processes. When more than one project in a Visual Studio solution can run independently, you can select which project the debugger starts. The current startup project appears in bold in Solution Explorer. To change the startup project, in Solution Explorer, right-click a different project and select Set as StartUp ...

Debug multiple processes - Visual Studio | Microsoft Docs

The name "Startup" is by ASP.NET Core convention. However, we can give any name to the Startup class, just specify it as the generic parameter in the UseStartup<T>() method. For example, to name the Startup class as MyStartup, specify it as .UseStartup<MyStartup>(). Open Startup class in Visual Studio by clicking on the Startup.cs in the solution explorer.
